Projects

- **Industry web portal**

Time duration: July - August 2016 (2 month)

As a freelancer this was my second project on PHP/HTML. having worked on the project for 2hrs/day it took 15 days to complete the development and updates and testing. I've used Bootstrap for the responsiveness of the site and kept the code re-usable and simple that the site loads in seconds. the mailing function has been implemented with php for contact form.

- **WordPress template development**

Time duration: June - July 2016 (2 month)

As a PHP developer this was my 1st wordpress custom template development project. Having sound knowledge in PHP and MySQL database, I took interest in developing the template on my own. Wrote custom functions and hooks with PHP scripts in implementing the backend of the template. Wrote more than 1000+ lines of CSS styles that makes the template look classic and responsive. Usage of bootstrap framework made the template user friendly and responsive. With more than 10+ custom designed pages, this template is suitable for any browser and for different platforms.

- **Academy Website**

Time duration: June 2016 (1 month)

As a freelancer this was my 1st wordpress project. Having taken the responsibility of building the site, I've gathered necessary requirement and details that the client needed on the site. I used custom CSS and Scripts that are needed to make the template come out as expected. I worked with plugins that enables functions like mailing, blogging, subscription and user management. Good and clear communication with the client helped me develop the site as per the requirement at a short span of time.

- **Blood bank application – Android (Cross platform)**

Time duration: September 2016 – November 2016

Blood bank application was a cross platform android application built using Ionic framework and with firebase backend support. Angular JS was the language that I've used to program the application. Firebase was used as database to store data. This application is compatible for any android OS with version 4.0 and higher.

- **E-commerce Application – Android (Cross platform)**

Time duration: September 2016 – November 2016

This was my personal android project on E-Commerce application on Android. Being a cross platform application, I've used ionic framework and firebase to build the application. Angular JS was the language used for programming the application.

- **E-commerce Application – PHP & MySQL**

Time duration: September 2016

My personal PHP project was this E-commerce application. Built over PHP and MySQL this application provides all the basic functionalities of an E-Commerce application along with an admin panel to add and manage products.
